

## Founders Online XML metadata format

Elements within <document>

<Title>	A title assigned by the editors to the document.
<Permalink>	The permanent URL for the document in Founders Online (founders.archives.gov)
<Project>	The name of the editorial project that supplied the document.
<Author>	The (or a) author of the document
<Recipient>	The (or a) recipient of the document
<Date-from>	The earliest date on the document, expressed as Year-Month-Day
<Date-to>	The latest date on the document, expressed as Year-Month-Day

## Founders Online JSON metadata format

Same semantics as the XML elements, with these data types:

title	string [required]
permalink	string [required]
project	string [required]
authors	array of zero or more author string values [required]
recipients	array of zero or more recipient string values [required]
date-from	string (Y-M-D)
date-to	string (Y-M-D)
